Fall Dormancy
 1 = Highly Dormant
 9 = Less Dormant

HR = High Resistance > 51% of plants resistant
R = Resistance 31 - 50% of plants resistant
MR = Moderate Resistance 16 - 30% of plants resistant
LR = Low Resistance 6 - 15% of plants resistant
S = Susceptible < 5% of plants resistant
- = No data available

Phirst (hybrid)

Phirst is the first hybrid alfalfa that Brodbeck Seed has offered. This variety was developed using the patented Hybrid Alfalfa Technology. Phirst will produce outstanding forage yields in aggressive cutting regimes across diverse environments. Forage quality potential of Phirst is excellent and will normally be equal to or greater than conventional varieties' forage quality. Phirst Hybrid alfalfa regrows rapidly and has a fall dormancy of 4 with excellent winter survivability and solid persistence across multiple years. This alfalfa is an excellent choice for the most demanding alfalfa producers.

Quest

Quest is a Brodbeck premium brand alfalfa. It offers high yields and top forage quality potential. Quest is a tap-rooted variety with a Disease Resistance Index of 30/30, making it suitable for most soils in our region. It will excel on well drained soils and will respond to good fertility. Quest has a very quick recovery that will take full advantage of our growing season. This variety will be an excellent choice for dairy or beef producers who demand the very best available alfalfa for their production system.

Classic Plus

Classic Plus alfalfa is a premium Brodbeck branch rooted, high yielding variety designed for poorly drained soils. The branch rooted characteristic enables this variety to grow vigorously in tight, poorly drained soils and to resist winter heaving damage. It has an excellent overall disease resistance package and the added benefit of resistance to aphanomyces race 2. Classic Plus has very good winter hardiness and fall dormancy numbers and will produce high yields of excellent quality forage. Classic Plus makes an excellent companion alfalfa to a highly productive tap rooted variety.
